Starting this year and every year forward, the Rogers Water Utilities will request that all irrigation backflow assemblies be tested between April 1st to May 31st and the results of said testing be sent to the RWU by June 15th.

It is a requirement that all backflow assemblies, by Rogers City Ordinance Sec. 54-58, residential or commercial, be tested by a certified tester within 10 days of being activated into service and then annually. The purpose of testing is to ensure the RPZ will prevent any cross contamination to the public mains.

Link to certified testers is http://www.healthy.arkansas.gov/eng/autoupdates/xcon/xcon04.htm

All tests results can be sent to the following;
